A

General Description:

The R-4985-20R detectable warning plates are designed to facilitate inclusive public spaces by making high-traffic areas safer and more accessible for the visually impaired. Built to CSA B651-12 and ASTM 1028 standards, these cast-iron tactile plates effectively signal changes in level or a transition from sidewalk to street and prevent slipping with grid-textured surfaces and truncated domes. Easily installed by setting in concrete, these plates are engineered to withstand being ran over by heavy vehicles and are fully recyclable at the end of their life cycle.
